

## Inquiry Question

How do you move design inspiration and principles from paper to a 3-d model?

Name: \_\_\_\_\_ Date: \_\_\_\_\_

## General Instructions

Background considerations:

In this project you will be designing for a specific shape. Like reality, people come in all different shapes and sizes. As individuals we always have the challenge of finding clothes and dressing our bodies. The Fashion design world often develops from a slender nine head high model. The retailers then face the challenge of selling these designs to a population that does not match the shape. Designers often have face the challenge of designing for a variety of shapes and sizes.

For this project you will explore this challenge by developing a a fashion-based set of clothes for a

soap bottle.

Part 1.

Begin with creating a storyboard of inspiration for your design. You may actually choose to collect real items that you will use. For example when I made my design, I wanted a little black dress, so I use a single black sock and cut off the bottom of the sock. The dollar store is a great place to get ideas

Part 2

Once you have your storyboard created, start creating! You can use glue to create instead of sewing, but you can sew if you choose. Please take pictures of the process!! Take a few photos of your end product

Part 3

A paragraph reflecting on the process and your final project. If you need help reflecting on the process, you can use the following statements to help guide your reflection

- In making this project I learned....
- I found it interesting....
- I was most challenged by....
- After creating this project I am more curious about....

Rubric

	3	2	1
Inspiration	Very creative. Lots of items and photos to work from	You have met the criteria but you do not have a lot to work from	You need more ideas and materials to get you going
Photographs	Excellent image of the process	You have included some of the photos outlining the process but more would have given me a better idea of what you did.	You did little to share the process with me.
Soap bottle design (x2)	Excellent design, well-constructed and your end product is creative with attention to detail (x2)	One or two elements of your design could use more attention but overall you did well. (X2)	It looks like your project did not go as well as anticipated. (X2)
Reflective Paragraph	Excellent reflection. You clearly have given the process a lot of thought	You have made some good connections with the process.	Little effort or thought was given to the process

Possible score 15

**Materials you'll need:**

- Empty Bottle
- Fabric, material for designing
- Glue-gun, glue, tape, scissors
- A camera

**Project submission:**

- Please upload your photos and your written reflection below
